

How cloud-based RFID works

in retail stores

attach RFID labels to your **merchandise**

program the RFID labels so every item gets a unique **identity**

export your stock list ("what you think you have") from your ERP system and send it to the !D Cloud software

send the data to the **!D Cloud software**

to find out "what you actually have" on the **sales floor**

count your **merchandise** with an RFID handheld

review and approve the **differences** in the !D Cloud software

update your **ERP system**

replenish from the stock room or DC based on **accurate data**

raise your merchandise availability and **increase** sales
